Brussels Sprouts

Roodnerf

100 days. One of the last open-pollinated varieties in existence that still retains excellent eating quality and uniformity. The medium to tall plants are quite cold hardy and yield plump, green sprouts.

1/4 gram

$2.95

Sowing Indoors-Start seeds 4-6 weeks before your average last frost date and transplant out after the danger of a hard frost.

Sowing Outdoors-Direct sow mid-May through June.

Growing Tips-Transplant younger, smaller plants (4-5 inches) rather than larger ones to establish strong roots and stems. Cool temperatures during sprout development are important for compact buds.

Fertilization Tips-Apply ¼ ½ cup of our complete fertilizer into the soil around each transplant. Avoid excessive nitrogen, as it can cause discolored, loose buds.

Harvesting Tips-Begin picking the bright green buds at the bottom. The upper sprouts will continue to mature after the lower ones have been harvested.

Seed Specs-Min. germ. standard: 75%. Usual seed life: 3-4 years.

Some varieties are suitable for winter gardening. See our winter catalog.
