Asian Melon

Early Silver Line

75-80 days. One of the most productive and remarkably sweet melons that we have grown. This unique, Asian type melon has very thin, smooth, yellow skin with creamy sutures creating a striped effect. The 1-2 pound fruit, have white, crisp, highly fragrant interior flesh.

**SOWING INDOORS** Start seeds 3 weeks before your last frost date. Use a heat mat to achieve optimum soil temperature. Make sure to transplant into the garden bed before the taproot emerges out of the bottom of the pot.

**SOWING OUTDOORS** Not recommended, but can be direct sown as long as soil temperature is above 70°F. Space plants 3-4 feet apart in the row.

**GROWING TIPS** We have found that planting in raised beds and using mulches will help ripen even the largest melon a full 2 weeks early. Consistent moisture levels are necessary to avoid rotting. Soil should be barely moist to the touch.
Melon

Cucumis melo

Hale’s Best: Heirloom cantaloupe with aromatic tangerine sorbet flavor. Oval fruits have slightly ribbed netted skin. Vine-ripened fruits average 5-6 lbs. Harvest when skin turns gold and fruit slips.

Planting Tips: Melons are warm season annuals that grow best in fertile, well-drained soil. Start transplants 4 weeks before planting date. Direct seed or transplant 1-2 weeks after danger of frost has passed, one row in center of bed. Can also be planted in hills of 3-5 plants in rows 3-5’ apart.

Cantaloupe

Code: Melon2

Melon Organic

Minnesota Midget Cantaloupe

65-70 days. Exquisite heirloom produces early, mini fruit, 4-6 inches across, with deep orange flesh that is succulent, sweet, and delicious to the rind. Compact plants, ideal for short season, container, and small space gardens.

1/2 gram $3.25

Sowing Indoors—Start seeds 3 weeks before your last frost date. Use a heat mat to achieve optimum soil temperature. Make sure to transplant into the garden bed before the taproot emerges out of the bottom of the pot.

Sowing Outdoors—Not recommended, but can be direct sown as long as soil temperature is above 70°F. Space plants 3-4 feet apart in the row.

Growing Tips—We have found that planting in raised beds and using mulches (available in our catalog) will help ripen even the largest melon a full 2 weeks early. Consistent moisture levels are necessary to avoid rotting. Soil should be barely moist to the touch.

Fertilization Tips—Apply 1/2 cup of our complete fertilizer around each plant to provide the nutrition necessary for optimum production.

Disease Prevention Tips—Melons are susceptible to bacterial wilt and powdery mildew. Select disease resistant varieties and avoid overhead watering.

Seed Specs—Min. germ. standard: 80%. Usual seed life: 3 years.

Code: Melon3
Melon
Crenshaw

Sweet, oval shaped melons with salmon-colored flesh. Grows up to 10 lbs.
SOW in fertile, warm soil in full sun after all danger of frost. Sow 4-6 seeds about 3” apart in hills 4-6’ apart. Cover with 1/2” of fine soil; firm lightly and keep evenly moist. Seedlings emerge in 7-10 days.

Code: Melon4
Amish melon first offered in the SSE Yearbook in 1983. Oval fruits are 9” long and weigh 4-7 pounds. Sweet orange flesh is very juicy with full muskmelon flavor and a rather thick rind. Produces good crops under almost any conditions at Heritage Farm. 80-90 days.

Instructions: Melons love heat. Sow seeds outdoors in 12” diameter hills after danger of frost has passed and soil has warmed. Space hills 6’ apart in all directions. Seeds will germinate in 4-10 days. Can also be started indoors 2-3 weeks before last frost.
