Code: Pep2
Hot Pepper

**Code: Pep3**

**Code: Pep4**
Hot Pepper

**Code: Pep5**

**Pepper Chinese Five Color**
Great for container planting.

**Packing Instructions**
Start seeds indoors 8-10 weeks before last frost date of spring. Surface-sow or barely cover the seeds, which benefit from light to hurry germination. Keep the seed tray in warm conditions, but do not allow to get dry. When sprouts appear, move to a sunny window or grow light. Set out well-developed transplants after last frost date when weather is warm. Peppers need rich soil.

**Packed By:**

---

**Code: Pep6**

**Early Jalapeno Hot Pepper**
Capsicum annuum

**Early Jalapeno:** Early ripening and hot bite. Blunt 3” x 1” peppers can be eaten when dark green, or wait until they ripen to a deep red. Compact plants are sturdy and work well in containers.

**Planting Tips:** Peppers are long season, heat-loving annuals which require transplanting to reach full maturity in most areas. Start transplants 6-8 weeks before planting date, after the danger of frost. Optimal soil temperature for germination is 75-85°F. Harvest promptly to encourage higher yields of ripe fruit.

- Store seeds in a cool, dry place.

---

High Mowing Organic Seeds

Certified Organic by Vermont Organic Farmers, LLC.
**Pepper Fireball F1**

75 days. A moment of sweet, followed by a searing heat your tongue will remember. Sturdy plants set heavy crops of 1 1/2 inch round, strawberry-shaped fruit that start a deep, shiny green, turning blazing red when ripe.

100 seeds $8.45

**Sowing Indoors** - Start seeds 8-10 weeks before your average last frost date. Use a sterile seeding mix and keep uniformly moist. Germination may be slow and erratic. Provide the seedlings with plenty of light to produce strong, high-yielding, mature plants. Use a heat mat to achieve the optimum soil temperature.

**Sowing Outdoors** - Not recommended.

**Growing Tips** - The number of early flowers can be increased by giving the plants a cold treatment before transplanting outside. This is done by exposing the plants to temperatures of 55°F during the night and 70°F in the day. Cold treatment should occur only after there are 3 sets of true leaves. Transplant out when soil temperature has warmed to 65°F.

**Fertilization Tips** - High phosphorous soil amendments such as bone meal will help get the plants off to a fast start. Apply 1/2 cup of our complete fertilizer around each plant to provide the nutrition necessary for optimum production.

**Seed Specs** - Min. germ. standard: 70%. Usual seed life: 2 years.

Please read our seed guarantee before opening this envelope.

**Pepper Italian Pepperoncini**

Great Little Pickling Pepper

This popular, little, thin, pickling pepper produces 3"-5" fruit that have superb flavor and just a little heat. Small plants. This heirloom comes from southern Italy.

**Planting Instructions**

Start seeds indoors 8-10 weeks before last frost date of spring. Surface-sow or barely cover the seeds, which benefit from light to hurry germination. Keep the seed-tray in warm conditions, but do not allow to dry out. When sprouts appear, move to a sunny window or grow-light. Set out well-developed transplants after last frost date when weather is warm. Peppers need rich soil. Peppers may be used green or ripe.

**Napoleon Sweet**

Napoleon Sweet (*Capsicum annuum*)

Eight-inch elongated bells are as mild as apples. Fruits stand upright on 2’ plants and ripen from green to red. Best used when green or just turning to red. Productive large pepper that bears consistently until frost. Early large pepper, great for stuffing. 70-90 days from transplant.

**Instructions**

- Sow seeds indoors ¼” deep. Peppers germinate best in warm soil, so gentle bottom heat may be helpful until seedlings emerge. Wait to transplant outdoors until soil is warm.

Sweet Pepper

Shishito Pepper
open-pollinated | 60 days green, 75 days red
1/64 ounce | Item: 2794

Pepper
Capsicum annuum
Shishito: Small, mild Japanese pepper with thin walls that blister and char easily when pan-fried, roasted or grilled, taking on rich flavor that is delicious with coarse salt and lemon juice. Typically harvested green, but eventually turns orange and red with sweeter flavor.

Planting Tips: Peppers are long season, heat-loving annuals which require transplanting to reach full maturity in most areas. Start transplants 6-8 weeks before planting date, after the danger of frost. Optimal soil temperature for germination is 75-85°F. Harvest promptly to encourage higher yields of ripe fruit.

Pepper Syrian Three Sided
SUPER-SWEET

Pepper Syrian Three Sided
80 days. Large fruits are about 6-8 inches long and as large as a coffee cup. Fruits are three-sided just like the name says. Ripens to a deep crimson red. Taste is super-sweet but occasionally, there is heat in the skin. Very productive in our trials. Another gift from our Syrian friend, Raghad Gorani. This Syrian heirloom made a big hit in our kitchen's last summer as they have excellent flavor.

Planting Instructions
Start seeds indoors 8-10 weeks before last frost date of spring. Surface-sow or barely cover the seeds, which benefit from light to hurry germination. Keep the seed tray in warm conditions, but do not allow to dry out. When sprouts appear, move to a sunny window or grow light. Set out well-developed transplants after last frost date when weather is warm. Peppers need rich soil. Peppers may be used green or ripe.

Pacific Northwest grown, open pollinated, and organic seed.

SWEET PEPPER
Etiuda

1g
Basket = 30 seeds

80 days. Vivid orange bell pepper, produces loads of blocky, thick-walled fruit early and throughout the season. High percentage of well-formed fruit, good leaf coverage, and very little blossom end rot or lodging. Almost candy sweet when fully ripe. Winner of our outdoor sweet pepper trials.

Lot: 01  Germ: 90%  Packed for 2019

www.adaptiveseeds.com

Adaptive Seeds PEPPERS

Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well-watered. Transplant seedlings into 4" pots when they have their first two true leaves. Transplant out into the garden after danger of frost has past, typically late May in western Oregon.

To save seed, wait until fruits are fully ripe. Remove seeds from fruit and dry in an airy location. Isolate from other pepper varieties by at least 500 feet.

 Protects seeds from direct sunlight.
