Radish

**Cherry Belle Radish**
- Open pollinated
- 25 days to maturity
- 1/16 ounce
- Sows-7 ft
- Dcm: 2850

**Radish**
*Raphanus sativus*

**Cherry Belle**: Classic red garden radish. One-inch, round radishes with a crispy white flesh and moderate heat. Will not split easily and retains quality for a long harvest period.

**Planting Tips**: Garden radishes are cool season, hardy annuals. Direct seed as soon as soil can be worked. Thin to promote even-sized roots. Plant every 10 days for a continual supply. Harvest radishes promptly for best quality. Topped radishes store well for 3-4 weeks in refrigerator.

- Store seeds in a cool, dry place

**RADISH**

**Early Scarlet Globe**

Early forcing radish for home or market gardeners, good for bunching. One-inch globes with bright red skin and white flesh. A sure cropper. Plant in the spring or fall. 20-28 days.

**Instructions**: Sow seeds outdoors as soon as soil can be worked in spring. Plant in full sun. Successive plantings can be made every 3-4 weeks throughout summer and fall to provide a continual harvest.

RADISH
Rudi

2 g ≈ 225 seeds

Raphanus sativus. 26 days. Very high quality, classic red bunching radish. Globe shaped with bright white flesh. Refreshingly crisp and tasty. Uniform, quick to mature, and holds well much longer in the field than most open pollinated bunching radishes.

Lot: 01  Germ: 98%  Packed for 2019

Code: Rad5

Adaptive Seeds

RADISH

Direct sow 1/4" deep, March through September in rows that are 1’ apart. Germination in 5-7 days. Thin to 1” by eating young plants. For mild flavor and to avoid pithiness, eat before they reach 2” across.

Collect seeds from 20+ plants in the second year when seeds have dried down, usually in July. Cut seed heads, place on tarp, dry a few more days, then dance to free seed. Collect seeds and winnow to clean. Isolate from other Raphanus sativus by 1 mile.
